Hi! I'm Sebastian, an avid learner of new technologies with excellent communication skills.
Let me know if you have any questions :)

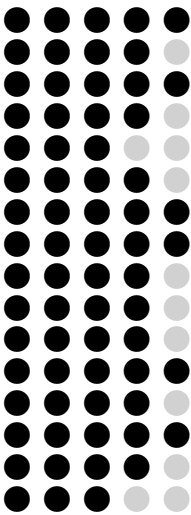

Education

Master's Degree in Math (Lic.)
Faculty of Exact and Natural Sciences, UBA
2014 - 2023

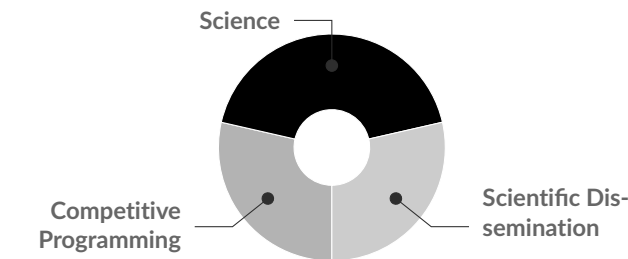

Technical School with ICT specialization
Escuelas Técnicas ORT
2009 - 2013

Skills

Python
SOLID, OOP
Restful APIs, JSON
Javascript, Typescript, React
Cursor, Windsurf, Claude Code
Github, Github Actions, Copilot
Code Quality
Code Testing/Scalability
Docker
PostgreSQL, databases
Django, FastAPI
Linux, macOS
unittest, Jest, Pytest, Selenium
Code Quality
AWS (s3, boto3, lambda, IAM roles)
Google Cloud Platform

Interests

Technical Experience

Backend & Full-stack Developer Toptal + indep. clients

Sep '22 - Present Madrid

Worked as an independent freelancer in different full-stack projects, using React+JS for frontend, Python + Django/FastAPI (sometimes NodeJS) for backend, and PostgreSQL for storage. Publishing projects in Heroku or through AWS or GCP. LLM integration via GPT and Claude APIs.
TDD with unittest, Pytest, Jest, Selenium and mocks.
Docker and Github Actions for CI/CD.
Including merged PR in langchain Open Source project: [link](#)

Backend Engineer & Data Analyst The Numerious Group

Jan '22 - Oct '22 Remote

Developed a mathematical model to predict future temperature values based on past information, improving previous versions by 10% on average. Created tests that allowed new code to be tested before deployment.

Software Engineer Intern Facebook Inc

Jul '21 - Oct '21 London
Jan '20 - Mar '20

- Full-stack project using Hack/PHP, React and GraphQL. Moved system for Identity Verification for running Political Ads in Brazil from deprecated system to new one in Comet. Launched without issues, getting 2000 exposures per day. Decreased users' errors in 25%.
- Full-stack project using Hack/PHP and React. Improved the experience of selling products through any Facebook product (Instagram, Marketplace, etc.), increased user success in 15%.

Software Engineer Brightsector (startup) for Mercadolibre

Feb '14 - Sep '22 Buenos Aires

- Code maintenance and creation of frontends (Django). CI/CD methodology with Jenkins and Bitbucket pipelines.
- Use of Python, Icinga web and Linux server to create tests for mercadolibre's API to check new code deployed.
- Use of Javascript, Python, Java, HTML in Linux system: Creation of web scrapers in Python; use of Selenium to check inbox capacity in gmail.
- Worked under Agile methodologies.
